

INCINER8

Waste Incineration

Animal & Waste Incinerators

We can now offer our range of incinerators exclusively throughout Europe and the rest of the world through our dealer network. Our range of units are fully CE certified, ensuring that we meet the highest standards in safety and construction. We also have a large range of DEFRA approved units which meet the ABPR regulations for incineration of animal by-products.

The Benefits of Incineration . . .

SANITARY - Waste can be destroyed as fast as it accumulates. Nothing is left to spread disease or to attract rodents and flies.

CONVENIENT - Fill the chamber and turn on the burner. No watching required since timer automatically shuts down burner. Alternative methods frequently require more time to manage and maintain.

THOROUGH - Leaves only sterile white ash and brittle bone fragments. Reduces 200kg of animal carcasses to approximately 10kg of sterile residue.

One of the main features of our incinerator range is that they burn virtually smoke and smell free without the need for a secondary burner because of their patented internal design.

Their simplicity of operation make the units a key benefit on any waste disposal application by avoiding the need for constant supervision.

Model Range

Available from 100kg capacity up to 750kg capacity. Burner options available in Diesel / Kerosene, LPG gas or Natural Gas. Mobile Incinerator and Medical versions also available.

Applications...

- Industrial
- Poultry
- Sheep
- Pet cremation
- Medical / veterinary
- Kennel / Stable waste
- Pig farms
